Performance and Partnership

Manager

Subject: Scottish Index of Multiple Deprivation (SIMD) 2020

1.0 PURPOSE

1.1 The purpose of this report is to provide the Policy and Resources Committee with a more detailed analysis of the results from the SIMD 2020 and to inform the Committee of the work that is currently being taken forward in connection with this.

2.0 SUMMARY

- 2.1 A report on the SIMD 2020 was considered by the Policy and Resources Committee on 4 February 2020. A commitment was given to the Committee to bring a report to its next meeting containing a more detailed analysis of the SIMD 2020, along with associated recommendations.
- 2.2 The Briefing Note attached as Appendix 1 aims to provide the Committee with a fuller picture of the SIMD 2020 results. Information is provided on each of the seven domains that make up the SIMD. Looking at the individual domain and the indicators that make up the SIMD rank can help to provide an understanding of why one area has a different ranking from another.
- 2.3 When the considering the domain data, it is important to remember that each domain is weighted based on its relative importance in measuring multiple deprivation, the robustness of the data and the time lag between data collection and the production of the SIMD. The domain weightings used in SIMD 2020 expressed as a percentage of the overall weight are income (28%), employment (28%), health (14%), education (14%), geographic access to services (9%), crime (5%) and housing (2%). This means that together, the income and employment domain make up 56% of the overall SIMD. Housing has the lowest weighting, 2%.
- 2.4 Some of the key points within the Briefing include:
 - Inverclyde has the highest local share of all councils for the percentage of data zones in the 5%, 10% and 20% most deprived data zones.
 - Inverclyde has the second highest local share of all councils for the percentage of data zones in the 15% most deprived data zones. Glasgow City has the highest local share.
 - A large proportion of Inverclyde's data zones have very high levels of income and employment deprivation, which has a significant impact on the overall SIMD data zone rankings e.g. Inverclyde's most deprived data zone, which is located in Greenock town centre, has an income deprivation rate of 48% and an employment deprivation rate of 44%.
- 2.5 In publishing the SIMD, the Scottish Government emphasise the point that not all people experiencing deprivation live in deprived areas and not everyone in a deprived area is experiencing deprivation. Within Invercive:

- 13,945 (17.7%) people are estimated to be income deprived.
- Of this number, 10,143 live in the 20% most deprived data zones, therefore 3,802 income deprived people live outwith the 20% most deprived data zones.
- Of the working age population 7,126 (14.3%) are estimated to be employment deprived.
- Of this number, 4,994 live in the 20% most deprived data zones, therefore 2,132 employment deprived people live outwith the 20% most deprived data zones.
- 2.6 In addition to the Briefing Note attached as Appendix 1, an analysis of movement between deciles has been carried out. This shows that between 2016 and 2020:
 - 24 data zones moved into a more deprived decile;
 - 14 data zones moved into a less deprived decile, this includes 5 data zones that can be found within the 20% <u>least</u> deprived in Scotland.

There was already a significant gap between the least deprived areas and those experiencing high levels of poverty and deprivation in Inverclyde and the latest SIMD data would suggest that this gap has widened further.

- 2.7 To establish a better understanding of the prevalent issues within Inverclyde's most deprived areas, a data group has been established by the Corporate Director Education, Communities and Organisational Development.
- 2.8 This group has been tasked with a 'deep dive' into 10 of the 51 data zones in Inverclyde that lie within the 20% most deprived in Scotland. Additional data has been gathered for the top 5 most deprived data zones in Inverclyde and also the 5 data zones that are also in the 20% most deprived, but have a ranking that places them towards the bottom of this category. The rationale for this is to look in more detail at our most deprived communities and also those that sit just within the threshold of the 20% most deprived. A data profile for each of these 10 data zones has been compiled.
- 2.9 Elizabeth Fraser from the Scottish Government's Communities Analysis Division attended a meeting of the data group on 4 March 2020. The purpose of this meeting was to provide further clarification around SIMD methodology and discuss any other issues with the data. A number of points were raised at the meeting that will be of interest to the Committee:
 - It was stressed that the SIMD is just one tool that should be used when looking at poverty
 and deprivation in an area and that for a fuller understanding of why rankings have
 changed you need to consider what else has happened within a data zone, such as
 population change due to new build/demolition.
 - The number of people in receipt of Universal Credit (UC) is one of the benefit indictors that make up the income and employment domains. UC was rolled out on a phased basis with Inverclyde Council one of three pilot areas which implemented UC in 2016. As there are more recipients of UC than legacy benefits then there is the likelihood that numbers in Inverclyde would be higher than those areas where, at the time of gathering the data, UC had not been rolled out to the same extent. In addition, as the first recipients of Universal Credit were single people then this is anticipated to have an impact on the ranking of those Inverclyde data zones with a higher prevalence of single person households. The data for the income and employment domains was gathered in 2018.
 - Revisions are planned for SIMD 2024 to the Income and Employment domains arising from the introduction of UC. This is significant because the Income and Employment domains make up 56% of the overall SIMD ranking.
 - The SIMD is not fully aligned with the Child Poverty indicators.
 - Data zones with a small population will be more sensitive to change and variation than data zones with larger populations. The most deprived data zone in Inverclyde has a smaller than average population, estimated to be 446. This means that it is likely to be more sensitive to even small changes in the data that is used to calculate SIMD rankings.

- 2.10 Tackling inequality is one of the three key priorities which underpins all the work of the Inverclyde Alliance. There are major challenges to be overcome in relation in reducing poverty and deprivation, delivering area renewal, increasing employment opportunities, improving health and reducing health inequalities. To be successful, this will need to be delivered through stronger, more targeted collaborative working. A full discussion on the SIMD is due to take place at the next Alliance Board meeting on 16 March 2020.
- 2.11 A report detailing the proposed process for allocating the recently approved £1million recurring funding for reducing poverty and tackling multiple deprivation in Inverclyde is also on the agenda of this Committee.

3.0 RECOMMENDATIONS

- 3.1 It is recommended that the Policy and Resources Committee notes:
 - The additional analysis that has been carried out on the SIMD 2020 and that this work continues to be ongoing through the SIMD data group.

Steven McNab Head of Organisational Development, Policy and Communications

4.0 BACKGROUND

- 4.1 The Scottish Government published the Scottish Index of Multiple Deprivation on 28 January 2020. The SIMD is a Scottish Government tool for identifying places in Scotland suffering from deprivation. Previous SIMD statistics have been published in 2016, 2012, 2009, 2006 and 2004.
- 4.2 SIMD 2020 is calculated using 2011 data zone boundaries. These data zones are based on the 2011 Census and were introduced in November 2014. 2011 boundaries differ from 2001 data zones which were used in previous SIMD editions. This means that whilst comparison can be made between SIMD 2016 and 2020, the data cannot be directly compared with previous editions of the SIMD.
- 4.3 The SIMD is based on small areas known as data zones. Each data zone has on average between 700 and 800 people living in it. As data zones are population-based they can however vary hugely in size. Scotland has been divided into 6,976 data zones and Inverclyde consists of 114 of these.
- 4.4 The SIMD 2020 uses data relating to multiple aspects of life in order to gain the fullest possible picture of deprivation across Scotland. Seven different domains are used, covering income, education, employment, health, housing, access to services and crime. The domains are measured using a number of indicators to form ranks for each domain. Data zones are ranked from 1 being most deprived to 6,976 being least deprived. Each of the seven domain ranks are then combined to form the overall SIMD. This provides a measure of relative deprivation at data zone level, so it tells you that one data zone is relatively more deprived than another but not how much more deprived.
- 4.5 The use of data for such small areas helps to identify 'pockets' of deprivation or multiple deprivation that may be missed in analyses based on larger areas such as council wards or local authorities. The data can be used to target policies and resources at the places with greatest need.

5.0 SIMD 2020 - ADDITIONAL ANALYSIS

- 5.1 A report on the SIMD 2020 was considered by the Policy and Resources Committee on 4 February 2020. A commitment was given to the Committee to bring a report to its next meeting containing a more detailed analysis of the SIMD 2020, along with associated recommendations.
- 5.2 The Briefing Note attached as Appendix 1 aims to provide the Committee with a fuller picture of the SIMD 2020 results. Information is provided on each of the seven domains that make up the SIMD (income, employment, education, health, geographic access to services, crime and housing). Looking at the individual domain and indicators that make up the SIMD rank can help to provide an understanding of why one area has a different ranking from another.
- 5.3 When the considering the domain data, it is important to remember that each domain is weighted based on its relative importance in measuring multiple deprivation, the robustness of the data and the time lag between data collection and the production of the SIMD. The domain weightings used in SIMD 2020 expressed as a percentage of the overall weight are income (28%), employment (28%), health (14%), education (14%), geographic access to services (9%), crime (5%) and housing (2%). This means that together, income and employment make up 56% of the overall SIMD. The housing domain accounts for 2% of the SIMD because it uses data taken from the 2011 Census as no other data source is available at present.
- 5.4 Some of the key points within the briefing include:
 - Inverclyde has the highest local share of all councils for the percentage of data zones in the 5%, 10% and 20% most deprived data zones.
 - Inverclyde has the second highest local share of all councils for the percentage of data zones in the 15% most deprived data zones. Glasgow City has the highest local share.
 - A large proportion of Inverclyde's data zones have very high levels of income and

employment deprivation, which has a significant impact on the overall SIMD data zone rankings e.g. Inverclyde's most deprived data zone, which is located in Greenock town centre, has an income deprivation rate of 48% and an employment deprivation rate of 44%.

- 5.5 It is important to remember that the SIMD identifies multiply deprived *areas* not individuals, so not everyone living in a deprived area is individually deprived, and not all deprived individuals live in multiply deprived areas. The SIMD national report states that around two out of three people on low income do not live in deprived areas and around one in three people living in a deprived area is on a low income.
- 5.6 Alongside the SIMD ranking data, the Scottish Government publishes individual domain data which allows you to calculate the number of people that are considered to be income or employment deprived. Within Invercive:
 - 13,945 (17.7%) people are estimated to be income deprived.
 - Of this number, 10,143 live in the 20% most deprived data zones, therefore 3,802 income deprived people live outwith the 20% most deprived data zones.
 - Of the working age population, 7,126 (14.3%) are estimated to be employment deprived.
 - Of this number, 4,994 live in the 20% most deprived data zones, therefore 2,132 employment deprived people live outwith the 20% most deprived data zones.
- 5.7 In addition to the Briefing Note attached as Appendix 1, an analysis of movement between deciles has been carried out. This shows that:
 - 24 data zones moved into a more deprived decile;
 - 14 data zones moved into a less deprived decile, this includes 5 data zones that lie within the 20% <u>least</u> deprived data zones that improved in ranking.

There was already a significant gap between the least deprived areas and those experiencing high levels of poverty and deprivation in Inverclyde and the latest SIMD data would suggest that this gap has widened further.

- 5.8 To establish a better understanding of the prevalent issues within Inverciyde's most deprived areas, a data group has been established by the Corporate Director Education, Communities and Organisational Development. The group comprises officers from the HSCP, Inverciyde Council and partners.
- 5.9 This group has been tasked with a 'deep dive' into 10 of the 51 data zones in Inverclyde that lie within the 20% most deprived in Scotland. Additional data has been gathered for the top 5 most deprived data zones in Inverclyde and also the 5 data zones that are also in the 20% most deprived but have a ranking that places them towards the bottom of this category. The rationale for this is to look in more detail at our most deprived communities and also those that sit just within the threshold of the most deprived 20%. An initial data profile for each of these 10 data zones has been compiled.
- 5.10 The data group invited Elizabeth Fraser from the Scottish Government's Communities Analysis Division to its meeting on 4 March 2020. The purpose of this meeting was to provide further clarification around SIMD methodology and discuss any other issues with the data. A number of points were raised at the meeting that will be of interest to the Committee:
 - It was stressed that the SIMD is just one tool that should be used when looking at poverty
 and deprivation in an area and that for a fuller understanding of why rankings have
 changed you need to consider what else has happened within a data zone, such as
 population change due to new build/demolition.
 - The number of people in receipt of Universal Credit (UC) is one of the benefit indictors that make up the income and employment domains. UC was rolled out on a phased basis with Inverclyde Council one of three pilot areas which implemented UC in 2016. As there are more recipients of UC than legacy benefits then there is the likelihood that numbers in Inverclyde would be higher than those areas where, at the time of gathering the data, UC had not been rolled out to the same extent. In addition, as the first recipients of Universal

Credit were single people then this is anticipated to have an impact on the ranking of those Inverciyed data zones with a higher prevalence of single person households. The data for the income and employment domains was gathered in 2018.

- Revisions are planned for SIMD 2024 to the Income and Employment domains arising from the introduction of UC. This is significant because the Income and Employment domains make up 56% of the overall SIMD ranking.
- The SIMD is not fully aligned with the Child Poverty indicators.
- Data zones with a small population will be more sensitive to change and variation than data zones with larger populations. The most deprived data zone in Inverclyde has a smaller than average population, estimated to be 446. This means that it is likely to be more sensitive to even small changes in the data that is used to calculate SIMD rankings.
- 5.11 Tackling inequality is one of the three key priorities which underpins all the work of the Inverclyde Alliance. There are major challenges to be overcome in relation to reducing poverty and deprivation, delivering area renewal, increasing employment opportunities, improving health and reducing health inequalities. To be successful, this will need to be delivered through stronger, more targeted collaborative working and a full discussion on the SIMD is due to take place at the next Alliance Board meeting on 16 March 2020.
- 5.12 A report detailing the proposed process for allocating the recently approved £1million recurring funding for reducing poverty and tackling multiple deprivation in Inverclyde is also on the agenda of this Committee.

7.1 None.

8.0 BACKGROUND PAPERS

8.1 None.

Scottish Index of Multiple Deprivation 2020 Briefing Note Key points for the Inverciyde area

This briefing note aims to summarise the key components of the Scottish Index of Multiple Deprivation (SIMD) published on 28 January 2020, with a particular focus on the results for Invercive at the local level and the changes that have taken place since SIMD 2016.

Key points:

- 51 (44.7%) of Inverclyde's data zones are in the 20% most deprived in Scotland, this is the highest local share in Scotland
- Inverclyde has the second highest local share of data zones in the 15% most deprived in Scotland. The council with the highest local share is Glasgow.
- 22 (19.3%) of Inverclyde's data zones are in the 5% most deprived in Scotland, this is the highest local share in Scotland.
- There has been an upward trend in the number of data zones moving into the 5% and 10% most deprived in Scotland category that were previously in the 10-20% most deprived category.
- Most of the deprived data zones are within Greenock and Port Glasgow.
- Across Inverclyde 13,945 people are income deprived. This is 17.7% of the population and higher than the Scottish average of 12%. Of this number, 10,143 live in the 20% most deprived data zones, which means that 3,802 income deprived people do not reside in the 20% most deprived data zones.
- There are 7,126 people in Inverclyde that are employment deprived. This is 14.3% of the population and is higher than the Scottish average of 9%. There has been a small reduction in employment deprivation (1%) between 2016 and 2020. Of this number, 4,994 live in the 20% most deprived data zones, which means that 2,132 employment deprived people do not reside in the 20% most deprived data zones.
- Between 2016 and 2020:
 - the number of data zones in the income domain in the 20% most deprived increased by 6, from 47 to 53.
 - the number of data zones in employment domain in the 20% most deprived increased by 2, from 52 to 54.
 - the number of data zones in heath domain in the 20% most deprived increased by 3, from 50 to 47.
 - the number of data zones in education domain in the 20% most deprived increased by 6 from 36 to 42.
 - the number of data zones in geographic access domain in the 20% most deprived increased by 2, from 16 to 18.
 - the number of data zones in the housing domain in the 20% most deprived remained at 42.
 - the number of data zones in the crime domain in the 20% most decreased by 8 from 32 to 24.

SIMD 2020

Background and purpose of the SIMD

The Scottish Index of Multiple Deprivation is a relative measure of deprivation across 6,979 small areas in Scotland, known as data zones. Focusing on small areas shows the different issues there are in each neighbourhood. This could be poor housing conditions, a lack of skills or good education or poor public transport.

Previous SIMDs were published in 2004, 2006, 2009, 2012 and 2016, however changes to methodology and the data zone geographies, which resulted in an increase in the number of data zones in 2016 means it is not possible to directly compare results prior to 2016, although it is possible to draw some broad conclusions on the changes in relative levels of deprivation.

If an area is identified as 'deprived' this can relate to people having a low income but it can also mean fewer opportunities or resources, for example in health and education.

Limitations of the SIMD

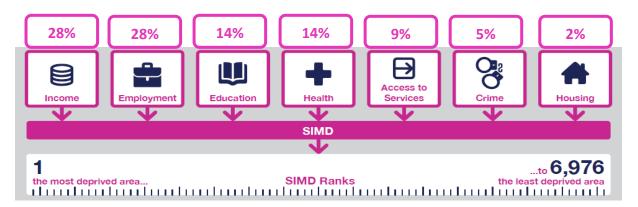

The limitations of the SIMD should always be remembered when considering the data:

- You cannot pinpoint how much more deprived one area is from another, as the difference between ranks can be tiny or large. It is therefore not possible to say the one data zone ranked 50 is twice as deprived as another data zone ranked 100.
- The SIMD is a relative ranking of all data zones in Scotland and as some improve and move in ranking, others will move up to take their place.
- The SIMD identifies multiply deprived areas not individuals, so not everyone living in a
 deprived area is individually deprived, and not all deprived individuals live in multiply
 deprived areas.

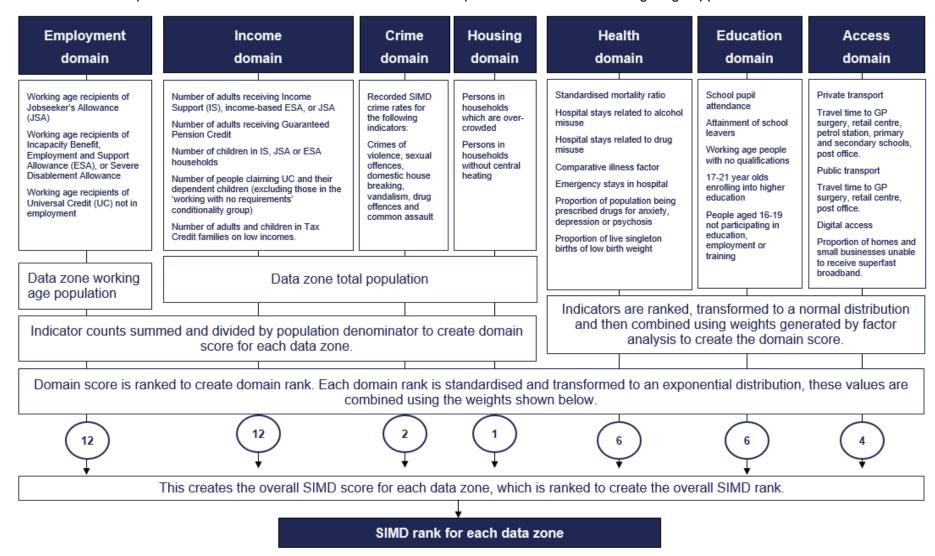

How the SIMD rankings are compiled

Data is gathered from across multiple aspects of life into 7 domains (income, employment, health, education, access, crime and housing) in order to gain the fullest possible picture of deprivation. More than 30 indicators of deprivation have been grouped together across these 7 domains which are then combined into the one index, to form a rank for each of the 6,979 data zones across Scotland. A rank of 1 is the most deprived and 6,976 is the least deprived.

Each domain has a weighting which translates to a percentage of the overall SIMD. **Income** and **employment deprivation** have the highest weighting and therefore have a greater influence on the overall SIMD rank than the other 5 domains as shown below.

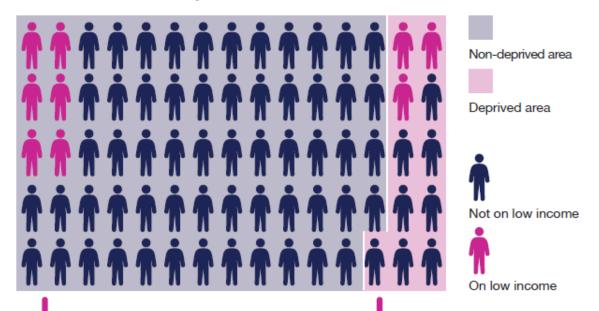

The information below provides an overview of the measures that make up each domain and the weightings applied

The Scottish Government infographic below highlights the important point that not all people experiencing deprivation live in deprived areas and not everyone in a deprived area is experiencing deprivation

SIMD identifies deprived areas - not people.

The box below shows why.

Not all people experiencing deprivation live in deprived areas. About two out of three people on low income do not live in deprived areas.

Not everyone in a deprived area is experiencing deprivation.
About one in three people living in a deprived area are on low income.

In this example, 'deprived area' means among the 15% most deprived areas in Scotland. We are using people on low income to represent people who are facing multiple deprivation.

Inverclyde: Key Findings

For the purposes of reporting the data, data zone rankings are most commonly grouped into categories such as vigintile (5% MD), decile (10% MD), quintile (20% MD) and the three most deprived vigintiles (or 15% MD) most deprived data zones.

The chart provides an overview of the changes in the 5%, 10%, 15% and 20% most deprived data zones between SIMD 2016 and SIMD 2020.

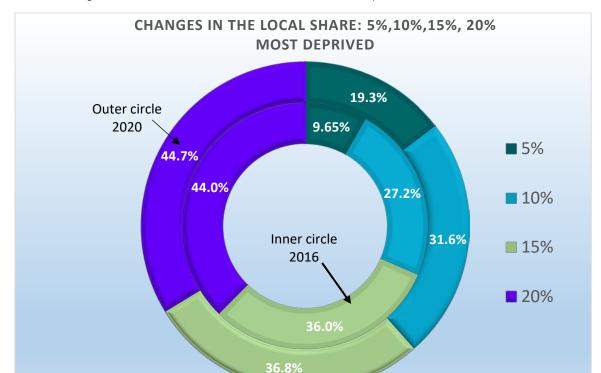

Chart 1 Changes in the local share in the 5,10,15 and 20% most deprived.

- The number of data zones in the 5% most deprived has doubled from 9.65% to 19.3%
- The number of data zones in the 10% most deprived increased from 27.2% to 31.6%
- The number of data zones in the 15% most deprived increased 36% to 36.8%
- The number of data zones in the 20% most deprived increased from 44% to 44.7%

There has been an increase in very high levels of deprivation (5% and 10% most deprived) with more data zones moving into these categories in 2020. These data zones previously fell into the 10-20% most deprived group. Overall, the number of data zones in Inverclyde that fall into the category of the 20% most deprived in Scotland increased by 1 between 2016 and 2020.

The map on the next page shows the concentration of data zones in the most deprived 10% and 20% in Inverclyde. The map shows that most of the deprived data zones within Inverclyde are within Greenock and Port Glasgow.

Data zones in the 10% most deprived and 20% most deprived in Inverclyde

The following sections provide more information on the changes within the 5%,10%, 15% and 20% most deprived data zones.

20% most deprived

Inverclyde comprises of 114 data zones. 51 of these data zones fall into the 20% most deprived in Scotland, i.e. have a ranking between 1 and 1395. This gives Inverclyde a 'local share' rate of 44.7%.

When ranked against other councils in Scotland in terms of our share of local data zones in the 20% most deprived, Inverclyde ranks in first place.

The table below shows the ten councils that have the largest local share of data zones in the 20% most deprived in Scotland.

Table 1: Scottish councils with the largest local share of data zones in the 20% most deprived

	Number of data zones	Local share of 20% MD
Inverclyde	51	44.74%
Glasgow City	331	44.37%
North Ayrshire	74	39.78%
West Dunbartonshire	48	39.67%
Dundee City	72	38.30%
North Lanarkshire	155	34.68%
East Ayrshire	50	30.67%
Clackmannanshire	18	25.00%
Renfrewshire	54	24.00%
Fife	88	20.42%

In 2016 Inverclyde had 50 of its 114 data zones in the 20% most deprived in Scotland which gives a rate of 44%, 0.74% lower than in 2020.

Table 2: Changes in local share of 20% most deprived between 2016 and 2020

	Number of data zones 2020	Local share of 20% MD 2020	Number of data zones 2016	Local share of 20% MD 2016	Change 2016 -2020
Inverclyde	51	44.74%	50	44%	+0.74%

15% most deprived

42 of Inverclyde's 114 data zones fall into the 15% most deprived in Scotland, i.e. have a ranking between 1 and 1046. This gives us a local share of 36.84%. This is the second highest proportion of all councils in Scotland, with Glasgow having the highest.

The table below shows the ten councils that have the largest local share of data zones in the 15% most deprived in Scotland.

Table 3: Scottish councils with the largest local share of data zones in the 15% most deprived

	Number of data zones	Local share of 15% MD
Glasgow City	284	38.07%
Inverclyde	42	36.84%
West Dunbartonshire	38	31.40%
Dundee City	58	30.85%
North Ayrshire	52	27.96%
North Lanarkshire	113	25.28%
East Ayrshire	37	22.70%
Renfrewshire	47	20.89%
Clackmannanshire	14	19.44%
Fife	78	15.79%

In 2016, a total of 41 of Inverclyde's 114 data zones fell into the category of the 15% most deprived in Scotland, giving a local share of 35.96%. This is 0.88% lower than in 2020.

Table 4: Changes in local share of 15% most deprived between 2016 and 2020

	Number of data zones 2020	Local share of 15% MD 2020	Number of data zones 2016	Local share of 15% MD 2016	Change 2016 -2020
Inverclyde	42	36.84%	41	35.96%	+0.88%

10% most deprived

36 of Inverclyde's 114 data zones fall into the category of the 10% most deprived in Scotland i.e. have a ranking between 1 and 698. This gives us a local share of 31.58%.

When ranked against other councils in Scotland in terms of our share of local data zones in the 10% most deprived, Inverclyde again ranks in first place.

The table below shows the ten councils that have the largest local share of data zones in the 10% most deprived in Scotland.

Table 5: Scottish councils with the largest local share of data zones in the 10% most deprived

	Number of data zones	Local share of 10% MD
Inverclyde	36	31.58%
Glasgow City	223	29.89%
Dundee City	43	22.87%
West Dunbartonshire	21	17.36%
North Ayrshire	32	17.20%
East Ayrshire	25	15.34%
Renfrewshire	30	13.33%
North Lanarkshire	59	13.20%
South Lanarkshire	44	10.21%
South Ayrshire	15	9.80%

In 2016, 31 of Inverclyde's 114 data zones fell into the category of 10% most deprived, giving a local share of 27.19%. This is 4.39% lower than in 2020.

Table 6: Changes in local share of 10% most deprived between 2016 and 2020

	Number of data zones 2020	Local share of 10% MD 2020	Number of data zones 2016	Local share of 10% MD 2016	Change 2016 -2020
Inverclyde	36	31.58%	31	27.19%	+4.39%

5% most deprived

Data zones within the 5% most deprived in Scotland (those data zones with a ranking of 1 to 348) are regarded as the most acutely deprived in the country.

22 of Inverclyde's 114 data zones fall into the category of the 10% most deprived in Scotland i.e. have a ranking between 1 and 698. This gives us a local share of 19.3%.

When ranked against other councils in Scotland in terms of our share of local data zones in the 5% most deprived, Inverclyde again ranks in first place.

The table below shows the ten councils that have the largest local share of data zones in the 5% most deprived in Scotland.

Table 7: Scottish councils with the largest local share of data zones in the 5% most deprived

	Number of data zones	Local share of 5% MD
Inverclyde	22	19.30%
Glasgow City	137	18.36%
Dundee City	22	11.70%
West Dunbartonshire	9	7.44%
North Lanarkshire	31	6.94%
North Ayrshire	12	6.45%
East Ayrshire	10	6.13%
Clackmannanshire	4	5.56%
Renfrewshire	12	5.33%
South Ayrshire	8	5.23%

In 2016, 11 of Inverclyde's 114 data zones fell into the category of 5% most deprived, giving a local share of 9.65%, half of the 2020 level.

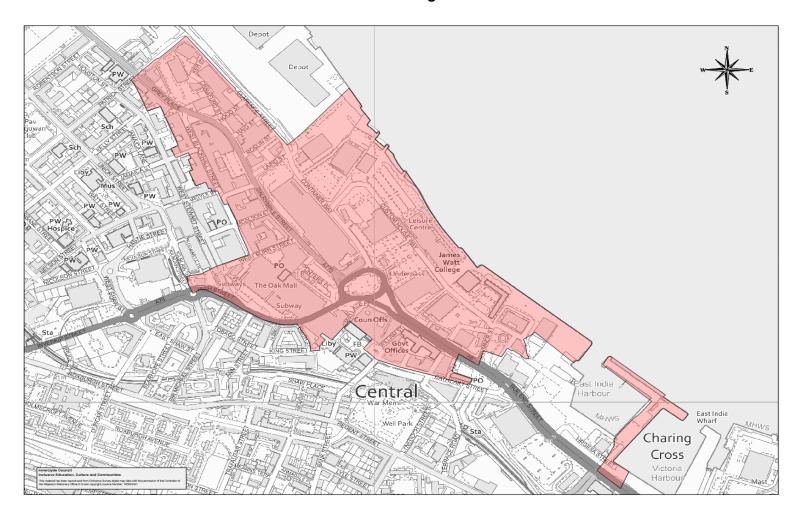

Table 8: Changes in local share of 5% most deprived between 2016 and 2020

	Number of data zones 2020	Local share of 5% MD 2020	Number of data zones 2016	Local share of 5% MD 2016	Change 2016 -2020
Inverclyde	22	19.3%	11	9.65%	+9.65%

11 of the 22 data zones in the 5% most deprived category also featured in this category in SIMD 2016. The remaining 11 data zones fell into the 10% most deprived category in 2016.

The most deprived data zone in Scotland is located in Greenock, specifically Greenock Town Centre (data zone S01010891). A map of the area is shown below:

Data zone S01010891: Greenock Town Centre SIMD ranking 1

When the 22 data zones that are in the 5% most deprived in Scotland are broken down further into those with the top 5 highest (i.e. worst) ranking, all five have increased in their relative ranking between 2016 and 2020 i.e. they have a more deprived ranking than in 2016. What the SIMD does not tell you however is how much more deprived these data zones are compared to 2016.

Table 9 shows how the rankings between 2016 and 2020 compare for the top 5 most deprived data zones.

Table 9: Top 5 most deprived data zones in Inverclyde ranking 2016 and 2020

Datazone	Intermediate geography	SIMD 2020 rank	SIMD 2016 Rank
S01010891	Greenock Town Centre and East central	1	23
S01010893	Greenock Town Centre and east central	15	77
S01010862	Lower Bow, Larkfield, Fancy Farm and Mallard Bowl	17	52
S01010903	Greenock East	35	147
S01010873	Greenock West and Central	54	175

The full list of Inverclyde data zones with their relative ranking in 2020 is provided in Appendix 1.

Income and Employment Deprivation

The Scottish Government publishes additional data alongside the SIMD which provides details of the number of people experiencing income and employment deprivation.

Together, the income and employment domain account for 56% of the overall SIMD. There are very high levels of income and employment deprivation within the 5% most deprived data zones and this will have had a significant bearing on the data zones overall SIMD ranking. This is shown in the charts below.

Chart 2: Income deprived rate in the 5% most deprived data zones in Inverclyde

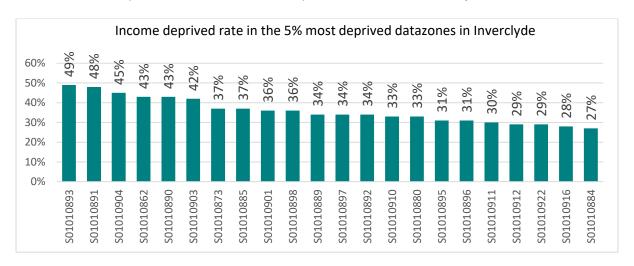

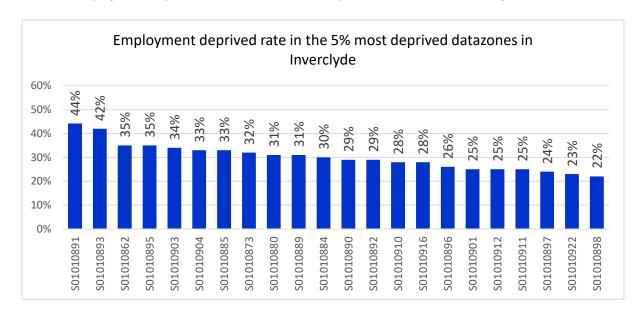

Chart 3: Employment deprived rate in the 5% most deprived data zones in Inverclyde3

Income deprivation

When looking only at the income domain, Inverclyde has 53 data zones that are in the 20% most income deprived in the country. This is 46.5% of all Inverclyde's data zones. Of these 21, or 18.4% are in the 5% most deprived in Scotland.

The most deprived income data zone in Inverciyde falls within the intermediate zone of Greenock Town Centre and East Central. This data zone (S01010893) has an income domain ranking of 5. The overall SIMD rank for this data zone is 15.

Across Inverclyde 13,945 people are classed as income deprived. This is 17.7% of the population and the second highest rate in Scotland. Other local authorities Glasgow City, West Dunbartonshire and North Ayrshire saw this rate fall.

In 2016, 13,420 people were income deprived which was 16.8% of the population. The percentage increase in income deprivation will have been affected by a drop in Inverclyde's population between 2016 and 2020 as the measure is taken as a percentage of the population.

Table 10: Income deprivation 2016 and 2020

	2020	2016	
Number of people income deprived	13,945	13,420	
Total estimated population	78,760	79,860	
% of Inverclyde population that are income deprived	17.7%	16.8%	

Of this 13,945 income deprived population, 10,143 live in the 20% most deprived data zones, which means that 3,802 income deprived people do not reside in the 20% most deprived data zones.

Between 2016 and 2020, the number of data zones in the income domain in the 20% most deprived increased by 6, from 47 to 53.

Employment deprivation

When looking only at the employment domain, Inverclyde has 54 data zones that are in the 20% most deprived in the country. This is 47% of all Inverclyde's data zones. Of these 23, or 20.2% are in the 5% most deprived in Scotland.

The most deprived employment data zone in Inverciyde falls within the intermediate zone of Greenock Town Centre and East Central. This data zone (S01010891) has an employment domain ranking of 4. The overall SIMD rank for this data zone is 1.

There are 7,126 working age residents in Inverclyde that are classed as employment deprived. This is 14.3% of the population and is the highest rate in Scotland. There was a small reduction in employment deprivation (1%) between 2016 and 2020, however this is a smaller rate of improvement that in other local authorities. West Dunbartonshire and North Ayrshire saw rates fall by over 2% which Glasgow's employment deprivation fell by almost 3%

Table 11: Employment deprivation 2016 and 2020

	2020	2016	
Number of people employment deprived	7,126	7,705	
Total estimated working age population	49,776	50,443	
% of Inverclyde population that are	14.3%	15.3%	
employment deprived			

Of the 7,126 employment deprived population, 4,994 live in the 20% most deprived data zones, which means that 2,132 employment deprived people do not reside in the 20% most deprived data zones.

Between 2016 and 2020, the number of data zones in employment domain in the 20% most deprived increased by 2, from 52 to 54.

Education Domain

This domain includes indicators which measure:

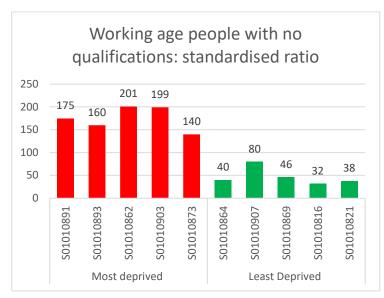

- Attendance
- Attainment
- No qualifications
- Youth unemployment
- University entrants

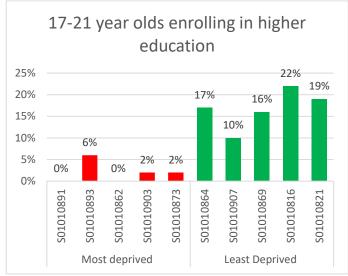

When looking at the Education domain on its own, there are 42 data zones in Inverclyde that fall into the 20% most deprived data zones in Scotland. This is 37% of all Inverclyde data zones. Of these 7, or 6% are in the 5% most deprived in Scotland.

Between 2016 and 2020, the number of data zones in education domain in the 20% most deprived increased by 6 from 36 to 42.

The most deprived Education data zone in Inverclyde falls within the intermediate zone of Lower Bow and Larkfield Fancy Farm and Mallard Bowl. This data zone (S01010862) has an Education domain ranking of 3. The overall SIMD rank for this data zone is 17.

The charts below shows how Inverclyde's top 5 most deprived data zones compare with the 5 least deprived data zones for two of the Education domain measures.

Health Domain

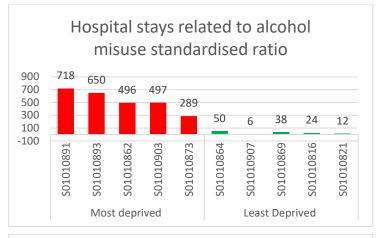

This domain includes indicators which measure:

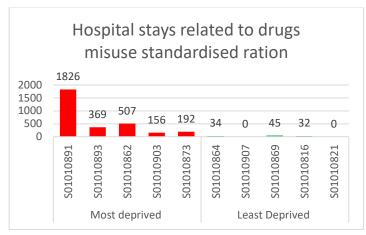

- Comparative illness
- · Alcohol and drugs hospital stays
- Mortality
- Number on anxiety / depression medication
- Low birth weight
- Emergency hospital stays

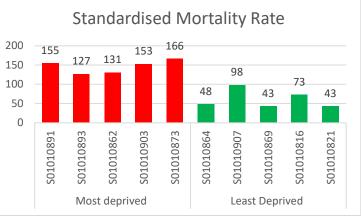

When looking at the Health domain on its own, there are 47 data zones in Inverclyde that fall into the 20% most deprived data zones in Scotland. This is 41.2% of all Inverclyde data zones. Of these 13, or 11.4% are in the 5% most deprived in Scotland.

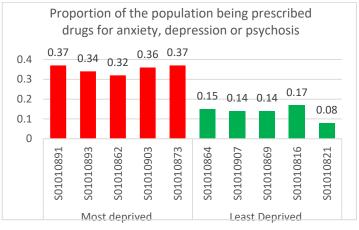

Between 2016 and 2020, the number of data zones in heath domain in the 20% most deprived increased by 3, from 50 to 47.

The most deprived Health data zone in Inverclyde falls within the intermediate zone of Greenock Town Centre and East Central. This data zone (S01010891) has a Health domain ranking of 2. The overall SIMD rank for this data zone is 1. The charts below shows how Inverclyde's top 5 most deprived data zones compare with the 5 least deprived data zones for four of the Health domain measures.

Geographic Access Domain

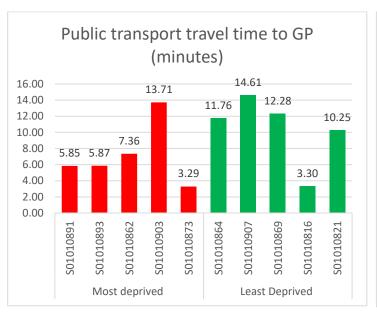

This domain includes indicators which measure average drive time and public transport time to main services such as GP, petrol station, post office, primary and secondary school, retails centre and superfast broadband.

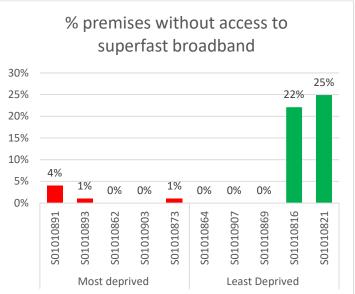

When looking at the Access domain on its own, there are 18 data zones in Inverclyde that fall into the 20% most deprived data zones in Scotland. This is 15.7% of all Inverclyde data zones. Of these 1, or 0.87% falls into the 5% most deprived in Scotland.

Between 2016 and 2020, the number of data zones in geographic access domain in the 20% most deprived increased by 2, from 16 to 18.

The most deprived Access data zone in Inverciyde falls within the intermediate zone of West Braeside, East Inverkip and West Gourock. This data zone (S01010833) has an Access domain ranking of 263. The overall SIMD rank for this data zone is 5513, which places in within the 30% least deprived data zones in Inverciyde.

The charts below shows how Inverclyde's top 5 most deprived data zones compare with the 5 least deprived data zones for two of the Geographic Access domain measures.

Housing Domain

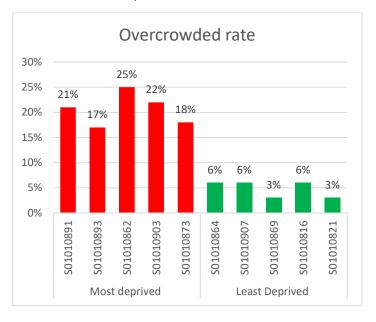

This domain includes indicators which measure the number of households that are overcrowded and without central heating.

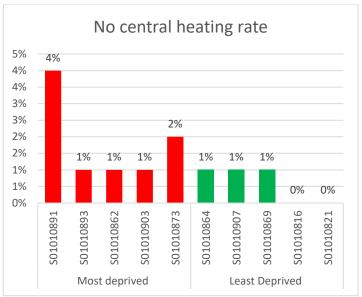

When looking at the Housing domain on its own, there are 42 data zones in Inverclyde that fall into the 20% most deprived data zones in Scotland. This is 36.8% of all Inverclyde data zones. Of these 3, or 3% fall into the 5% most deprived in Scotland.

Between 2016 and 2020, the number of data zones in the housing domain in the 20% most deprived remained at 42.

The most deprived Housing data zone in Inverclyde falls within the intermediate zone of Port Glasgow, Mid East and Central. This data zone (S01010916) has a Housing domain ranking of 171. The overall SIMD rank for this data zone is 300.

The charts below shows how Inverclyde's top 5 most deprived data zones compare with the 5 least deprived data zones for two of the Housing domain measures.

Crime Domain

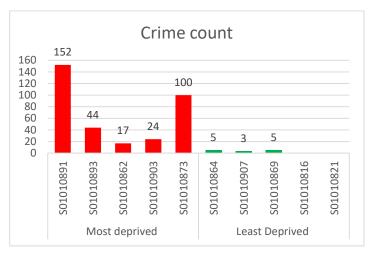

This domain includes indicators which measure recorded crime rate of selected crimes of violence, sexual offences, domestic housebreaking, vandalism, drug offences and common assault.

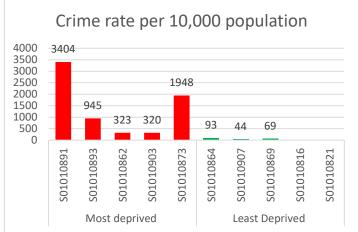

When looking at the Crime domain on its own, there are 24 data zones in Inverclyde that fall into the 20% most deprived data zones in Scotland. This is 36.8% of all Inverclyde data zones. Of these 6, or 5.2% fall into the 5% most deprived in Scotland.

Between 2016 and 2020, the number of data zones in the crime domain in the 20% most decreased by 8 from 32 to 24.

The most deprived Crime data zone in Inverclyde falls within the intermediate zone of Greenock Town Centre and East Central. This data zone (S01010891) has a Crime domain ranking of 17. The overall SIMD rank for this data zone is 1.

The charts below shows how Inverclyde's top 5 most deprived data zones compare with the 5 least deprived data zones for two of the Crime domain measures.
